Professional Sports Impact on College Revenue

Topic

- College baseball and basketball revenue as influenced by proximity to respective professional sports venues.
- This topic was chosen based on personal interest and the availability of baseball and basketball data at the professional and collegiate level.

Data

- College location and financial data from Equity in Athletics Data Analysis (EADA).
- MLB teams/stadiums from MLB Data API
- NBA teams/stadiums from <u>NBA Wikipedia page</u>
- Geographical coordinates via Wikimedia API.
- Distances to nearest professional stadiums computed using coordinates for stadiums and schools.

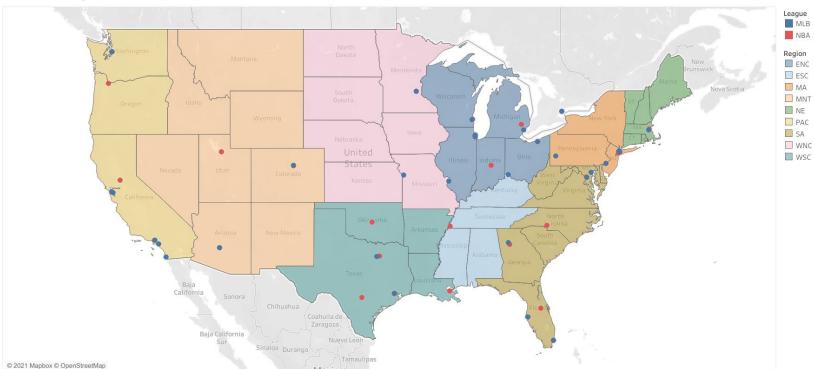

Question

 Does the proximity to a major league sports venue have a positive influence on college athletic program revenue in respective sports?

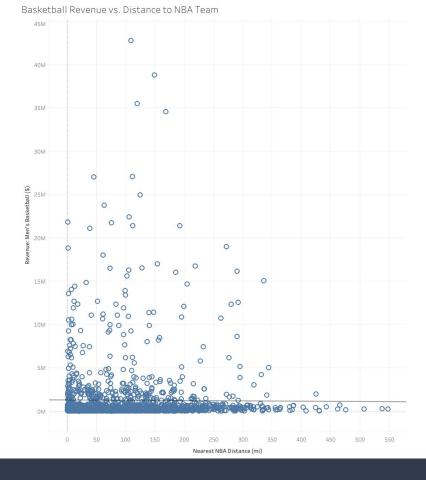

Data Exploration

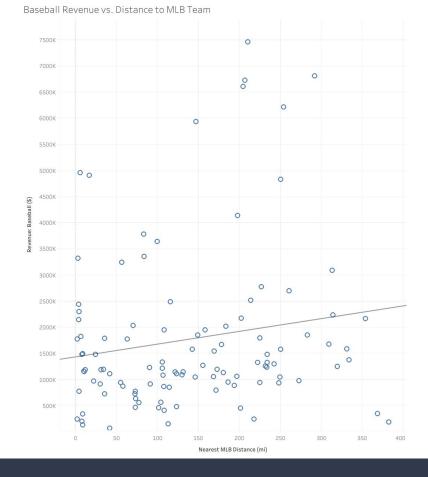

- 2,074 schools in original EADA dataset
- 1,812 colleges and universities whose pages were geotagged on Wikipedia (13% data loss due to unavailability of coordinates)
- Professional sports venues identified for each MLB and NBA franchise
- Coordinates for each professional sports venue collected
- Distance to nearest sports franchise to each college identified
- Colleges and sports franchises grouped into regions

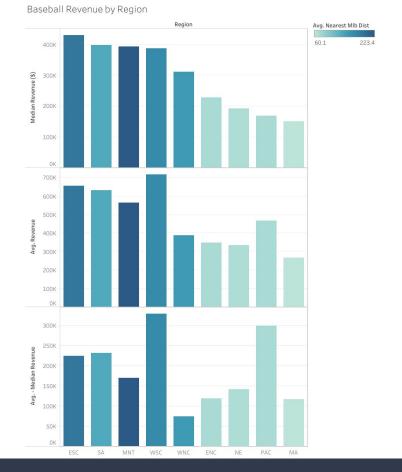

Teams and Regions

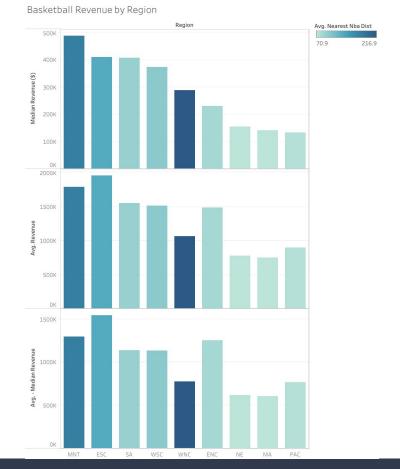

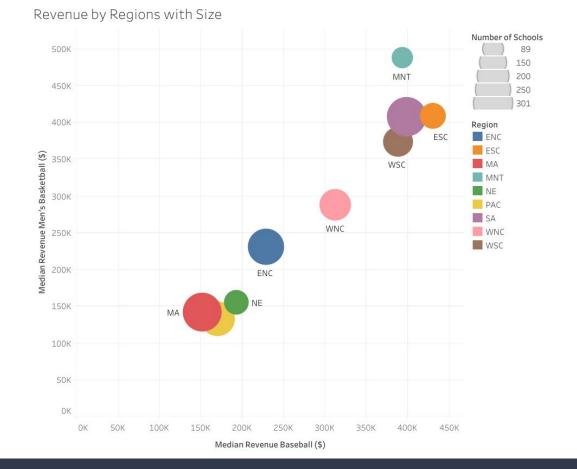

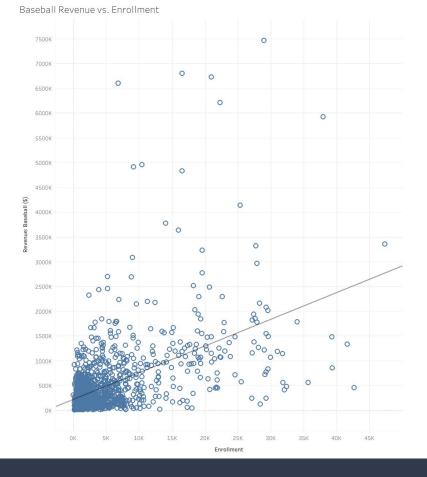

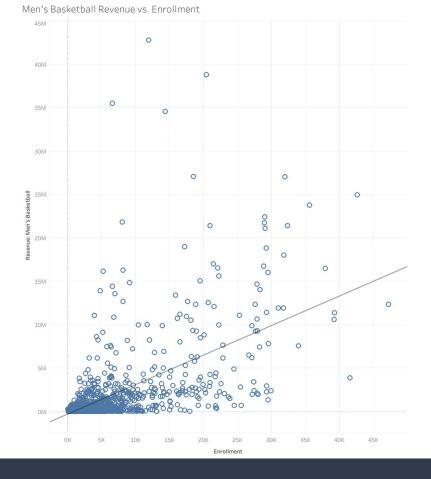

Summary

- No significant correlation between distance from professional teams and revenues for colleges included in the analysis
- Notable levels of correlation when the schools are grouped by region suggesting region may be a significant factor in determining the revenues for basketball and baseball at a college
